Tugas ReactJS Lanjutan Pertemuan 2
Fitur Update & Delete Data Genre dan Author pada Tampilan Admin

Link repository GitHub untuk Tugas ReactJS Lanjutan #2:
https://github.com/Shapiere/React-JS

Ringkasan Pekerjaan

Tugas meminta fitur **update** dan **delete** data Genre dan Author pada tampilan Admin, dengan desain antarmuka sesuai kreativitas masing-masing. Implementasi melanjutkan proyek tugas sebelumnya (React + Vite + Axios, backend Laravel) yang sudah memiliki fitur Read dan Create.

Yang Ditambahkan

```
Frontend (book-sales/src)
  services/genres.js   -> updateGenre(), deleteGenre()
  services/authors.js  -> updateAuthor(), deleteAuthor()
  pages/admin/Genre.jsx  -> tombol Edit + Hapus per baris, form dipakai ulang
  pages/admin/Author.jsx -> tombol Edit + Hapus per baris, form dipakai ulang
  index.css            -> style tombol aksi

Backend (booksales-api)
  GenreController  -> method update() dan destroy()
  AuthorController -> method update() dan destroy()
  routes/api.php   -> PUT dan DELETE untuk genre dan author
```

Alur Fitur

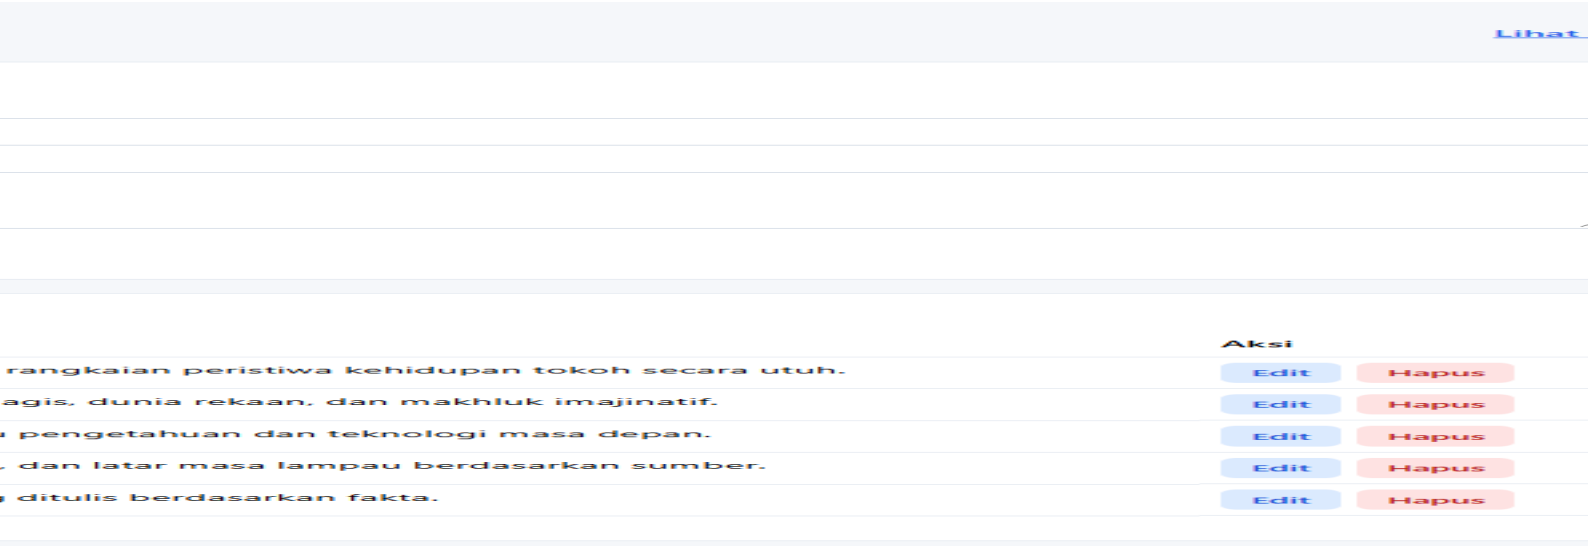

Update: tombol Edit pada baris tabel mengisi form dengan data lama dan menyimpan *id* yang sedang diedit. Saat disimpan, aplikasi memanggil `PUT /api/genres/{id}` (atau `/api/authors/{id}`), lalu memuat ulang tabel.
Delete: tombol Hapus meminta konfirmasi, memanggil `DELETE /api/genres/{id}`, lalu memuat ulang tabel. Jika baris yang dihapus sedang diedit, form otomatis direset.

Endpoint API yang Dipakai

```
GET    /api/genres       daftar genre
POST   /api/genres       tambah genre
PUT    /api/genres/{id}  ubah genre
DELETE /api/genres/{id}  hapus genre

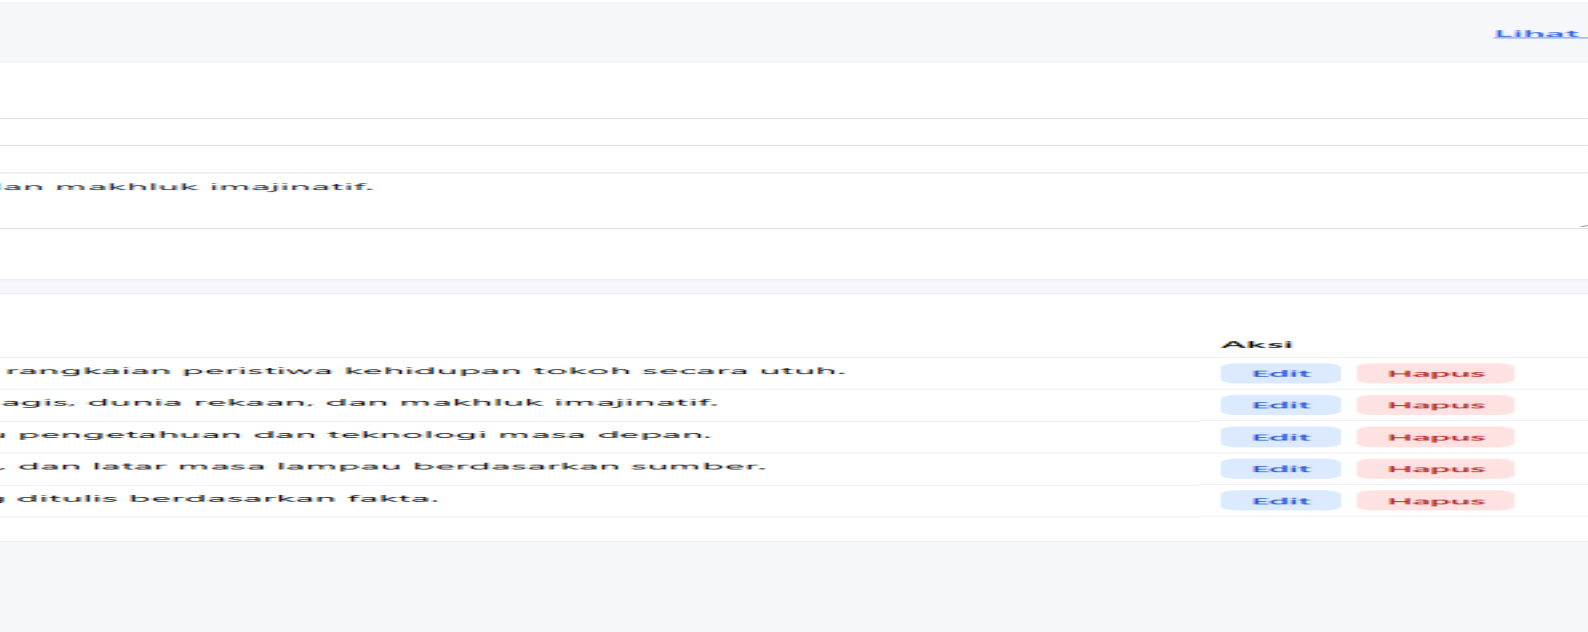

GET    /api/authors      daftar author
POST   /api/authors      tambah author
PUT    /api/authors/{id} ubah author
DELETE /api/authors/{id} hapus author
```

1. Daftar Genre dengan Tombol Aksi

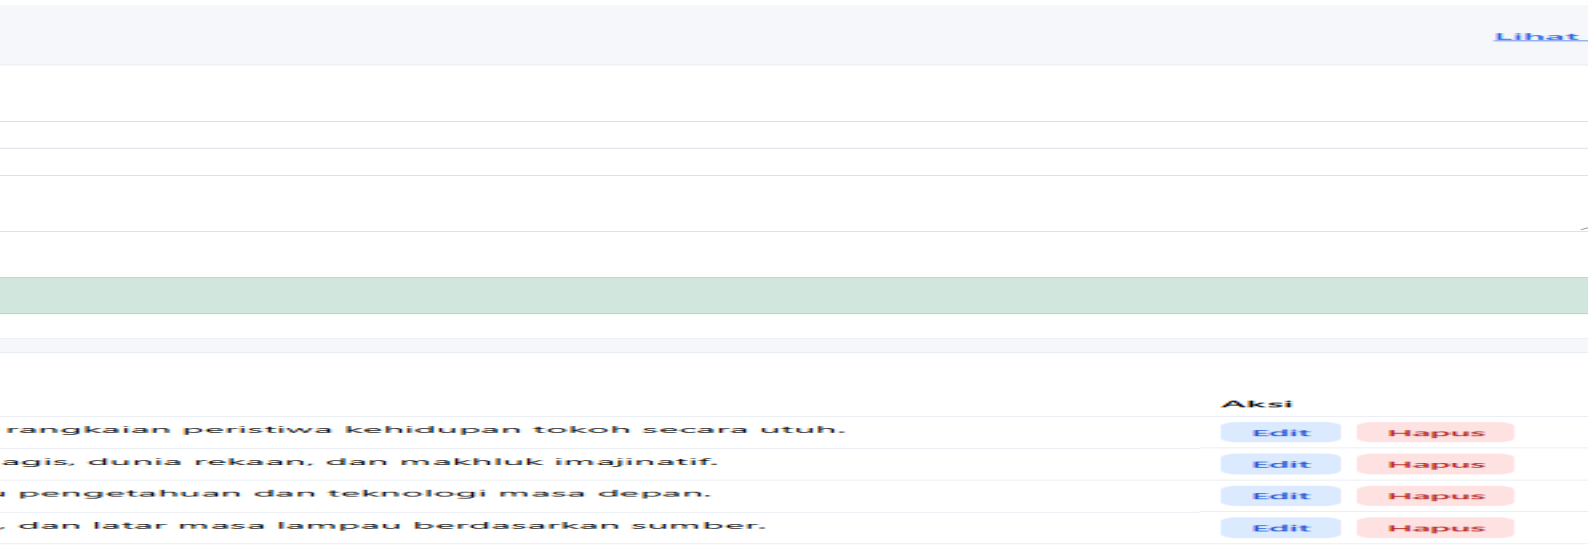

Tiap baris memiliki tombol Edit dan Hapus. Form di atas dipakai untuk tambah maupun ubah data.

2. Mode Edit Genre

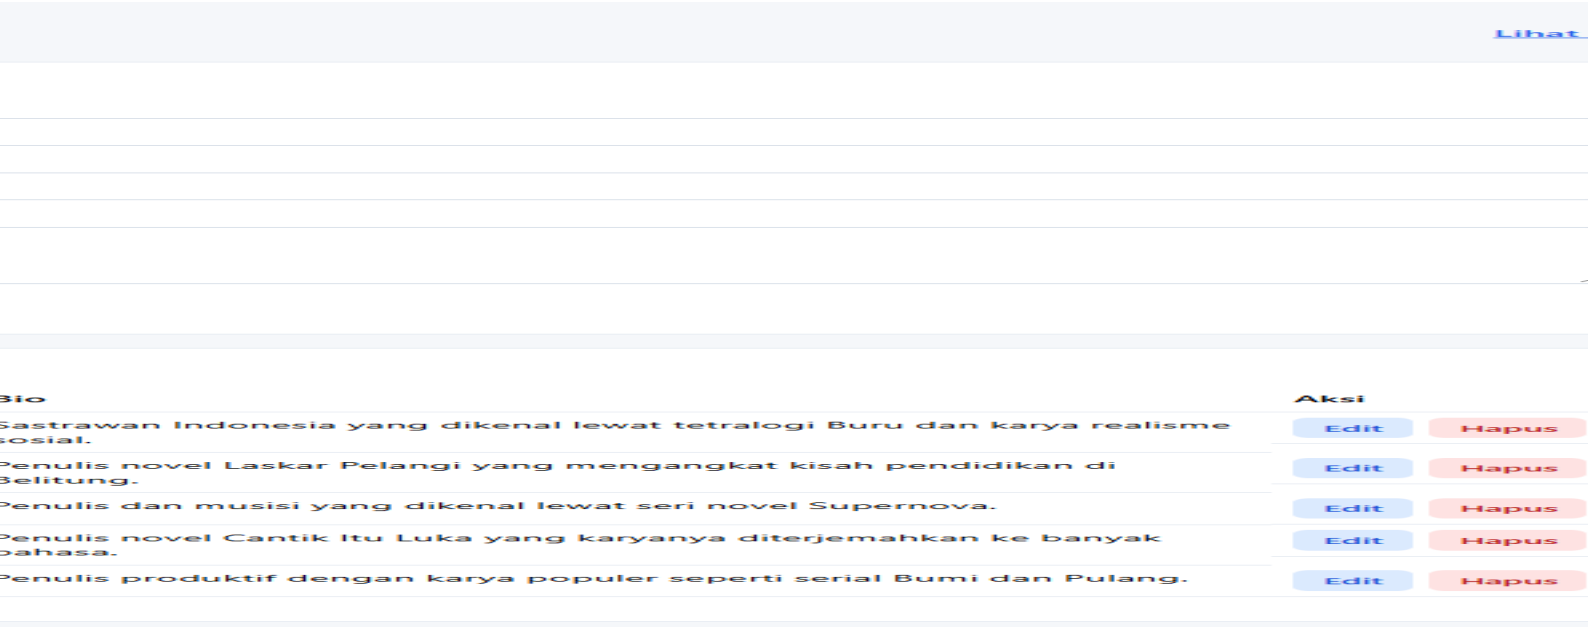

Menekan Edit mengisi form dengan data lama, judul berubah menjadi 'Edit Genre #2', tombol menjadi Simpan Perubahan dan muncul tombol Batal.

3. Genre Berhasil Dihapus

Setelah Hapus dikonfirmasi, data terhapus dari database dan tabel dimuat ulang (baris Biografi hilang, tersisa 4 baris).

4. Daftar Author dengan Tombol Aksi

Halaman author juga memiliki tombol Edit dan Hapus pada setiap baris.

src/services/genres.js

Service genre: Read, Create, Update, dan Delete.

```
import API from '../api'

// Read all genre
export const getGenres = async () => {
  const response = await API.get('/genres')
  return response.data.data
}

// Create genre
export const createGenre = async (payload) => {
  const response = await API.post('/genres', payload)
  return response.data.data
}

// Update genre
export const updateGenre = async (id, payload) => {
  const response = await API.put(`/genres/${id}`, payload)
  return response.data.data
}

// Delete genre
export const deleteGenre = async (id) => {
  const response = await API.delete(`/genres/${id}`)
  return response.data
}
```

src/services/authors.js

Service author: Read, Create, Update, dan Delete.

```
import API from '../api'

// Read all author
export const getAuthors = async () => {
  const response = await API.get('/authors')
  return response.data.data
}

// Create author
export const createAuthor = async (payload) => {
  const response = await API.post('/authors', payload)
  return response.data.data
}

// Update author
export const updateAuthor = async (id, payload) => {
  const response = await API.put(`/authors/${id}`, payload)
  return response.data.data
}

// Delete author
export const deleteAuthor = async (id) => {
  const response = await API.delete(`/authors/${id}`)
```

```
  return response.data
}
```

src/pages/admin/Genre.jsx

Handler update dan delete pada halaman admin genre.

```
import { useEffect, useState } from 'react'
import { getGenres, createGenre, updateGenre, deleteGenre } from '../../services/genres'

const emptyForm = { name: '', description: '' }

{/* Halaman admin: Read, Create, Update, dan Delete data genre */}
function Genre() {
  const [genres, setGenres] = useState([])
  const [loading, setLoading] = useState(true)
  const [error, setError] = useState(null)

  const [form, setForm] = useState(emptyForm)
  const [editingId, setEditingId] = useState(null)
  const [submitting, setSubmitting] = useState(false)
  const [notice, setNotice] = useState(null)

  const loadGenres = async () => {
    try {
      setLoading(true)
      const data = await getGenres()
      setGenres(data)
      setError(null)
    } catch (err) {
      setError(err.response?.data?.message ?? err.message)
    } finally {
      setLoading(false)
    }
  }

  // Ambil data awal saat komponen dimuat
  useEffect(() => {
    loadGenres()
  }, [])

  const resetForm = () => {
    setForm(emptyForm)
    setEditingId(null)
  }

  const handleChange = (event) => {
    const { name, value } = event.target
    setForm((prev) => ({ ...prev, [name]: value }))
  }

  const handleSubmit = async (event) => {
    event.preventDefault()

    const payload = {
      name: form.name.trim(),
      description: form.description.trim(),
    }
```

```
    try {
      setSubmitting(true)
      if (editingId) {
… (dipotong)
```
